

Residential Ant Management

Found Ants at Home? Here's What to Do:

Ants are adaptable and can quickly become a nuisance indoors. To help control them:

- Wipe up ant trails with soapy water to remove scents that attract other ants.
- Store food in sealed containers and rinse recyclables to avoid attracting ants.
- When our technician is on-site, let them know where you have seen ants.

Our Ant Management Approach:

We use a combination of strategies to effectively manage ants:

- **Outdoor Baits:** Placed around your home's exterior to intercept ants before they enter.
- **Targeted Treatments:** Reduced-risk insecticides are applied to ant trails and outdoor colonies to effectively control populations while minimizing environmental impact.
- **In-wall Treatments:** Least-toxic dusts are used in utility areas to block ant pathways.
- **Indoor Bait Stations:** Set up to attract and eliminate ants, helping us identify potential nests.
- **Gel Bait:** Applied at entry points around the exterior to stop ants from spreading indoors.
